Income Tracking

Expense and Income Tracking · https://arba.app/userguide/income_tracking/

Income tracking is carried out in much the same way as expenses tracking.

There are two distinctions

- For each income, you should create a separate entry; you cannot specify several items in one income.
- For income, you can create your own categories without any restrictions.

The income report is generated in the "Reports" tab, where in the main dashboard there are incomes, expenses separately, and the "Balance" line will appear.

The balance is income minus expenses. A positive value means profit, a negative value means loss. Revenue analytics can be viewed in "**Reports**".
