Optimal Method

Fuel Tracking · https://arba.app/userguide/optimal_method/

The standard method imposes many restrictions and takes more time to enter data. If it does not suit you, we recommend using the optimal method, which gives an equally accurate result.

It is not necessary to fill up the tank to full level or indicate the battery level - fill up as much as you need. It is also not necessary to always provide mileage. It is enough if you update the mileage 1-2 times a month. Indicate the date, the amount of fuel and the price (or amount). Based on the entered data, fuel / energy consumption indicators will be calculated, which you can see in the "Reports".
