Create an Account

Getting Started · https://arba.app/userguide/registration/

To use the ARBA Auto app, you need to create your own account so that you can access your data from different devices: phones and tablets running Android and iOS, as well as computers with an Apple M1 and M2 processor.

In guest mode, you can get an idea of the application's capabilities without registering. In order to exit guest mode, open the main menu by clicking the “burger” button in the upper left corner. A menu will appear. Tap "Logout".

Create your account on ARBA Auto

When registering, you will need to provide a name (we do not require your real name) and email. You will receive a message with a username and password for your account. Next, you will need to select the "Country and City": based on these data, the app will make the necessary settings for your account. For example, the correct units of measure and currency will be set, and additional options

available in your region may also be connected.

By clicking on the picture above the form, you can add the user's avatar.

You can register using external services (Facebook, Google, Apple). After registration, this will allow you to access the application on any device in one click without a login and password.

You can register using external services (Facebook, Google, Apple). After registration, this will allow you to access the application on any device in one click without a login and password.

When creating an account with ARBA Auto, please read the Terms of Use and Privacy Policy.

On the second step of registration, you will be asked to add a car. Indicate the brand, model, year of manufacture and name of your choice. If the brand or model you are looking for is not listed in the catalog, please let us know via this form. You can also upload a photo of the car. The image will need to be cropped to a 16:9 aspect ratio.

You can skip the vehicle setup step by clicking the "**Later**" button. In this case, a default vehicle will be created with the Unknown brand. Before using the application, it is recommended to complete vehicle settings.
